

Griffbereit

is directed at parents and their children aged one to three.

Griffbereit promotes the early infantile development by providing concrete toddler appropriate activities, and creates an important basis to acquire the necessary language skills.

This way, multilingualism is seen as a potential.

Dear parents,

you want to spend time with your child and receive some suggestions regarding games and language? Griffbereit helps you support your child's multilingual development in a playful way.

Griffbereit

- gives you suggestions regarding finger games and playful activities – coloring or drawing, rhyming and singing
- gives you information regarding health and day-to-day topics and helps you with understanding the German educational system
- prepares the children for the Kindertagesstätte
- gives you the time and opportunity to meet with other parents, to get to know each other and to exchange your experiences
- gives you the opportunity to go on excursions and experience other activities regarding nature, culture and games

This is how Griffbereit works

Griffbereit groups are play groups in which the family language and the German language as well as the children's general development are promoted.

Multilingual children and German speaking children get in contact with each other early on.

Once a week, you meet with other parents and their children for two hours. A qualified multilingual parents' guide (Elternbegleiter*in) provides these meetings.

These Griffbereit meetings can take place at the Kindertagesstätte, the family center or in other facilities of the town district.

The guide can offer some suggestions regarding game and language activities which you can then do with your child.

The Griffbereit material

To support you in spending time with and engaging your child, Griffbereit is available in 26 languages, e.g.: German, Turkish, Spanish, English, French, Kurdish, Russian, Arabic, Vietnamese, Albanian...

Partaking in the Griffbereit group and the multilingual material is free of charge!
